In recent years, international and domestic authorities alike have actively worked with the private sector to address LIBOR's shortcomings and to find alternative rates. One notable development has been the publication of an [international set of principles for financial benchmarks](#), developed by the International Organization of Securities Commissions (IOSCO) in 2013. These principles—which include 19 specific standards across governance, benchmark quality, methodology, and accountability—have emerged as the international standard. IOSCO has rightly focused on tying benchmarks more closely to observable, arms-length transactions.

The [Financial Stability Board \(FSB\)](#) and its members have published proposals, plans, and timelines for reference rate reform and have promoted the strengthening of the major interest rate benchmarks. The FSB has been carrying out work on the development and introduction of alternative benchmarks, developing a plan to accomplish a transition to new benchmarks, encouraging work by the private sector on contract robustness, and reporting regularly on the progress made.

To aid in the awareness of the IBOR transition processes impacting globally-active financial institutions, the Global Financial Markets Association (GFMA) has created the following documents outlining the various parts and players. This information is organized into the enclosed three products:

1. Key Timelines and Milestones for the Japanese yen, Euro, UK pound sterling, U.S. dollar, and the Swiss franc;
2. Snapshot of the IBOR and RFR variables associated with each currency;
3. 'At a Glance' Tracker of each official sector working group activities and near-term expected actions.

The information contained herein is based on the work of the FSB through the OSSG as well as other publicly available information. For ongoing IBOR transition updates, please reference the individual central bank working groups:
